Portfolio: thornqt.github.io

E-3 Visa Eligible

Final-year Information Technology student specializing in cloud systems, APIs, and machine learning, with hands-on experience building scalable applications on AWS and deploying containerized services. Proven ability to manage complex workflows, communicate with stakeholders, and deliver structured solutions in high-pressure environments. Seeking a graduate role in product, cloud, or technology-focused teams.

PROJECTS

CamVision AI — Capstone

- Designed edge-based CCTV monitoring system using Python, OpenCV, and PyTorch (ResNet-18) for real-time obstruction detection
- Built cloud-integrated architecture using AWS (API Gateway, Lambda, DynamoDB) to process metadata and trigger automated alerts
- Developed scalable pipeline separating edge detection from cloud processing for efficiency and cost optimization
- Collaborated in a 4-person Agile team using Git and Jira to deliver end-to-end solution

We-Hab Application

- Developed Java-based wellness tracking application using JavaFX for GUI and SQLite for data persistence
- Implemented user authentication, activity logging, and reporting features for health monitoring
- Collaborated in a team using Git version control and Agile workflows
- Focused on usability and accessibility in application design

Cloud API (AWS + Docker)

- Built and deployed containerized REST API using FastAPI and Docker on AWS EC2
- Implemented JWT-based authentication and multi-source data handling
- Designed stateless architecture integrating AWS services for scalability
- Managed deployment pipeline including container builds and cloud configuration

EDUCATION

Bachelor of Information Technology | Queensland University of Technology Expected: July 2026

San Francisco State University (SFSU) | San Francisco, Study Abroad Program
(Spring Semester 2025)

- President**, Int. Education Exchange Council (IEEC)

SKILLS & PROFICIENCIES

Languages:

Python, Java, JavaScript

Cloud & DevOps:

AWS (EC2, Lambda, API Gateway, DynamoDB), Docker

Tools:

Git, JavaFX

Concepts:

REST APIs, Cloud Architecture, Machine Learning, Databases, Enterprise Architecture

EXPERIENCE

Complex Complaint Manager — ENGIE

- Managed portfolio of 40+ high-risk, ombudsman-level customer cases requiring detailed analysis and resolution
- Acted as liaison between ENGIE and the Australian Energy Ombudsman, ensuring compliance and clear communication
- Delivered structured, high-stakes resolutions under tight deadlines in a regulated environment

Recoveries & Settlement Officer — Suncorp

- Managed end-to-end insurance claim processes within a high-volume operational environment
- Analyzed cases and resolved customer issues while ensuring regulatory compliance
